

Team Meeting Minutes Iteration2

Saturday, March 20, 2021 11:34 AM

First iteration2 meeting

3.19 Friday 6pm 20minutes

In this meeting, we discuss the teamwork division of iteration2

Clarify the changes we should make on data structure to preserve persistence (pickle)

Qs to do later:

- Authentication and authorization?
- Testing methods?

Second iteration2 meeting

3.20 Saturday 4pm 30mintes

IN this meeting, we reflected on the iteration 1 results and suggested what we should fix later.

We plan to finish one third of the iteration2 before Wednesday

Sawat and Aphisit will have a close look at invite and details to fix bugs

We decide to use pickle method to store data persistently

Qs to do later:

- Monday Help session
- ? How to test server
- Debug token generation

Third iteration2 meeting

3.23 Tuesday 7pm 30 minutes

IN this meeting, we discussed our progress. We've implemented about one third of functions, and ensure data persistence. We fixed the key errors in iteration one, and token is now implemented. Barry assigned each of us new functions to do. We'll finish about another one third of functionality before Saturday. Another meeting would be held on Saturday.

Qs to do later:

- Friday help session
- Server routes

Fourth iteration2 meeting: Functionality finalisation

3.27 Saturday 3pm 45 minutes

In this meeting, we checked every members' progress. For now, we have some dm functions, admin functions, search and notification unfinished. We will work on HTTP and debug next week. We also figured out some issues together: such as the 'members' variable type, how to remove users, search query string.

Qs to do later:

- 💡 Put our functionality codes together in a branch call 'it2' maybe
- Start writing more routes and HTTP tests

Fifth iteration 2 meeting: Debugging functionality

3.29 Monday 9pm 30 minutes

In this meeting, we discussed the issues we met while debugging. There are two important errors to solve: 1. test token invalid: how to generate invalid token and test it? Is check_token_invalid working well? 2. user_all, when multiple user are registered, why user_all shows their profile in wrong order? 3,2,1 instead of 1,2,3?

Sawat is working on admin stuff, Barry is working on notification, Aphisit is working on search, Joanna is working on collecting all finished functions and start HTTP server routes.

Qs to do later:

Ask tutor about unsure debugging issues in project_checkin session on Tuesday

Iteration 2 meeting: check coverage and finish HTTP tests

4.3 Saturday 9pm 40 minutes

IN this meeting, we focussed on the coverage (94% at the moment) . Barry suggested how to fix coverage issues. Joanna will upload meeting minutes later and fix coverage for auth, messages and user. Sawat and Aphisit will continue to work on finishing HTTP tests.

We plan to have another meeting tomorrow evening. Good luck and keep working~
